

STUA's commitment to ecological production is not just a recent occurrence. Since it was established, STUA has been committed to the environment. Over the years it has been implicated to the search for environmentally friendly raw materials, processes, products and packaging.

Among many others, we can highlight the following characteristics and actions:

Use of wood from sustainably managed forests

The wood used to manufacture our furniture comes from sustainably managed French forests registered with the PEFC (Programme for the Endorsement of Forest Certification).

The teak wood for our outdoor furniture comes from Myanmar and also complies with environmental parameters.

Ecological upholstery

- STUA's fabrics comply with the strict ISO 14001 international environmental regulations regarding its products and its manufacturing processes.

- STUA's upholstery is fire-resistant but avoids the use of harmful retardants like PBB and PBDE.

- The leather used comes from national sources, which implies compliance with ecological production NTE-CCA-021/88.

- Similarly, we offer our customers the option of finishes in ecoleather as a substitute for natural leather.

Hexavalent chromium-free finishes

STUA's chrome plating process uses a trivalent chromium bath to replace the highly-toxic hexavalent chromium bath. The trivalent chromium process must produce hard chrome components that perform as well as or better than the older process.

Other additional advantages involved in this process:

- It is not necessary to reduce hexavalent chromium in wastewater.

- It makes it easier to handle and use the product.

- No gas emissions are produced.

Processes with low water consumption

In the last 5 years, we have achieved a 31% saving in drinking water consumption by implementing saving processes.

Recycling

- The recyclability of the metallic materials used by STUA reaches 97%.

- The plastic elements are 99% recyclable.

- All STUA cardboard packaging is 100% recyclable because no staples are used in the production.

Postural health

Our products hold the main European certificates and comply with demanding German standards as regards product resistance and ergonomics.

At STUA we also care for people's health.
